

Endorsement for the EXIN DevOps Master

TOYOTA is a large enterprise but its operation is improving daily bases with matrix organization avoiding silo by product oriented. It is chief engineer system as you may know. And basics of the operation in TOYOTA is “Genchi-Genbutsu” which means go and see at on-site when you decide anything.

Many people studied TOYOTA way then realign its concept into Lean concept and Scrum and XP in Agile software development and spread out in global today.

It is very good movement for us living in 21st century to support efficiency of operation.

EXIN announced to certificate DevOps knowledge in global. It is magnificently useful work because it could not design DevOps process easily in the past due to many recommendable technology, practices, tools, and culture were introduced by many publications.

This EXIN’s announcement conducts us a right way to build up DevOps process from the chaos today.

We are very gratitude to help developing the program by our member of TPS certificate Institution.

We wish this program creates a stir into people who are involved Software development and IT operation management and they will have an interest in TPS much more in future.
