

CERTIFIED FLEXIBILITY

AGILE SCRUM

AGILE SCRUM

The flexible, adaptable approach to any project.

Agile Scrum is about running projects successfully by accepting and expecting change. It involves cross-functional and self-managed teams, producing working deliverables at the end of each iteration or Sprint. Maximum flexibility allows for adjustments and even changing course half way through a project, without the risk of never delivering or an unexpected mismatch between business requirements and system functions. Scrum is the most applied agile method in the world.

A changing world demands a changed approach. As Darwin realized many years ago, "It is not the strongest of the species that survives, nor the most intelligent, but the one most responsive to change." This truth is still applicable to the business world of today.

EXIN'S AGILE SCRUM EXAM PROGRAM

EXIN's Agile Scrum exam program is aimed at professionals in the fields of IT project management, software development, business management and IT service management, in particular for those that are leading or participating in changes and projects.

Agile Scrum benefits

Agile Scrum maximizes transparency. The flexible way of working allows for changing (business) demands, new requirements and new features. Testing is integrated throughout the project so that quality issues can be detected and addressed in an early stage. All stakeholders benefit:

- The project team, because of the clearly defined roles, interaction and flexibility.
- Managers, because the team runs itself and members are motivated and committed.
- The product owner, because (s)he gets what (s)he ordered.
- Other stakeholders, because everyone is constantly up to date.

Our unique certification program

Our unique certification program validates a professional's blended knowledge in agile methodologies and scrum practices. It can be applied to projects of all types, and combined with any Project Management framework or methodology, as well as other fields such as IT Service Management. It focuses on the basic principles and concepts of both Agile and Scrum with an emphasis on components like the sprint, the daily 15-minute meetings, the roles and ceremonies. EXIN certification guarantees:

- Professionals involved in projects or development have essential knowledge of a most effective method.
- Team members use the same vocabulary and have a basic understanding of both Agile principles and Scrum techniques.
- Professionals are able to apply Scrum methods and practices in different situations.

AGILE SCRUM MODULES

EXIN Agile Scrum Foundation

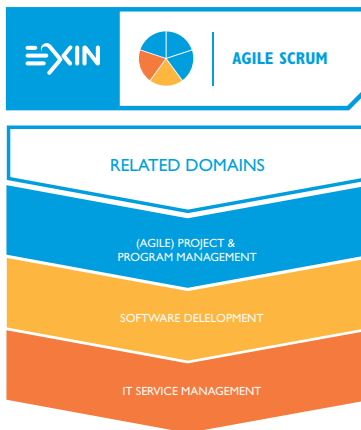

This module validates a professional's blended knowledge in Agile methodologies and Scrum practices, applicable to any type of project. More info at exin.com

EXIN Agile Scrum Master

This module covers both Agile thinking as well as specific Scrum practices. This advanced exam focuses on adapting Agile or Scrum in the workplace and taking on the role of Scrum Master. The training contains practical assignments and exercises. The Agile Scrum Foundation certificate is highly recommended, but not required. More info at exin.com

AGILE SCRUM IN RELATION TO OTHER ICT DOMAINS

The EXIN exam portfolio is mapped to the 40 different ICT competences, described by the international e-Competence Framework. (e-CF)

In the EXIN portfolio, Agile Scrum is part of the (Agile) Project & Program Management domain, which is related to the Manage area of the e-CF. Agile Scrum is also linked to the Build and Run area e-competences.
